The Fillmore Group Quickstart for InfoSphere Optim Query Capture and Replay

Highlights

- InfoSphere Optim Query Capture and Replay (IOQCR) mitigates risk with realistic testing.
- Take SQL running in a production system and rerun it against Production, QA, or Test databases to evaluate performance impact.
- IOQCR can be used to validate database configuration changes or even the viability of running an SQL workload developed for one database server on a different vendor platform.

About IOQCR

InfoSphere Optim Query Capture and Replay is a testing tool developed to complement existing regression, functional and performance testing with a deeper analysis of the data layer. IOQCR enables testing to evaluate the impact of hardware, workload, database and/or application changes.

This Quickstart offering is designed for organizations ready to implement IOQCR. The offering includes installation, a product overview and use case brainstorming session, and mentoring.
