The Fillmore Group Services for Data Studio Administration Console Quickstart

Highlights

- The Data Studio Administration Console (DSAC) is a free download.
- The DSAC provides real-time monitoring for Q-Replication.
- Thin client, browser-based interface replaces the Java Q-Replication dashboard.
- Easy to learn, deploy, and use.

About Data Studio

IBM Data Studio software is part of the Integrated Data Management portfolio, offering an integrated, modular environment to design, develop, deploy, operate, optimize, and govern enterprise data, databases, and data-driven applications.

If your organization uses Q-Replication to support database high availability, this offering will provide an accelerated implementation of the free IBM download, Data Studio Administration Console (DSAC).

DSAC enables organizations supporting Q-Replication to use a browser-based, thin client interface to monitor Q-Replication functions. The DSAC quickstart offering enables your organization to have a qualified Q-Replication expert work with your team to:

- Validate your current Q-Replication environment.
- Identify and address any current areas of weakness with Q-Replication.
- Assist with the Data Studio Administrative Console download and set-up, customizing it for your environment.
- Deliver onsite mentoring to enable your team to confidently support your Q-Replication environment using the Data Studio Administrative Console.
